

EFU HEALTHCARE HOMEOSTASIS LICENCE v1.0

Healthcare Homeostasis & Biomaintenance Audit Standard
Simor István – Nookratic Bloc
Release: 2026.01.12paste.txt

0. Purpose and Scope

Experimental **EFU-based licensing and measurement framework for healthcare homeostasis** (hospitals, outpatient care, pharmaceutical industry, medical devices).

NOT a replacement for medical licenses, drug approvals, or hospital operating regulations, but an **open research protocol** measuring the **physical cost of human biomaintenance** in human-scale **EFU metrics**:

- Sterilization
- Pharmaceutical waste
- Operating room energy
- Disinfection

Covers: Acute care, chronic treatment, pharmaceutical production.paste.txt

I. Core Concepts

EFU-Healthcare (EFU-HEALTH)

text
EFU-E_HEALTH: Hospital energy (sterilization, ORs, ventilators)
EFU-M_HEALTH: Single-use devices, prosthetics, syringes
EFU-W_HEALTH: Disinfectant water, dialysis, sanitary waste
EFU-P_HEALTH: Pharmaceutical waste (antibiotics, chemotherapy)
EFU-S_HEALTH: Surgical waste, hazardous medical refuse

Healthcare Sovereignty Gap (SS_HEALTH)

text
 $SS_HEALTH = TEFU_HEALTH_total - \text{Regional Biomaintenance Carrying Capacity (RBHK_HEALTH)}$

Measures if healthcare stays within society's regeneration capacity.paste.txt

MROI_HEALTH

text
MROI_HEALTH = THI_HEALTH / TEFU_HEALTH
THI_HEALTH = Life Years Saved + Chronic Disease Reduction + Self-Sufficiency Days

II. License Status

Certifies EFU-audited hospitals, clinics, pharmaceutical operations.
Critical fact: Healthcare = **highest waste intensity sector** (5-10x average).
Enables prevention vs. acute care benchmarking.paste.txt

III. Metrics

1. EFU Components (per 1000 Local Equivalents - LE)

text
EFU-M_HEALTH = plastic_syringe_kg / 30kg/person/year / 1000 LE
Example: 2kg/LE/year → 0.000067 EFU/LE
text
EFU-E_HEALTH = hospital_MWh / 12.88 / 1000 LE
text
EFU-P_HEALTH = pharma_kg / 1kg/person/year / 1000 LE
text
TEFU_HEALTH = 1.8×EFU-E + 2.5×EFU-M + 2.0×EFU-W + 2.2×EFU-P + 1.5×EFU-S

2. Regional Biomaintenance Carrying Capacity (RBHK_HEALTH)

text
RBHK_HEALTH = Sustainable_LE / Population / 0.05 LE/person/year
Example: Switzerland = 8.5M LE / 8.7M = 0.98 EFU_HEALTH/person/year

IV. License Categories

Level	SS_HEALTH	MROI_HEALTH	Label	Interpretation
1	≤ 0	≥1e-1	EFU-HEALTH SOVEREIGN	Prevention-focused
2	0 < ≤20k EFU	≥5e-2	EFU-HEALTH BALANCED	Hybrid care
3	20k < ≤100k EFU	≥1e-2	EFU-HEALTH DEFICIT	Hospital dominant
4	>100k EFU	<1e-2	EFU-HEALTH CRITICAL	Linear waste

V. Regional Calibrations

Country	LE (M/year)	Population (M)	RBHK_HEALTH
SWITZERLAND	8.5	8.7	0.98 theglobaleconomy+1
JAPAN	120	125	0.96
GERMANY	75	84	0.89
USA	300	340	0.88
HUNGARY	8	9.7	0.82

VI. Example: German Healthcare System

text

Input: 75M LE, 25B kWh, 150k tons single-use, 50k tons pharma waste, 1.5M tons medical refuse

$EFU_M_HEALTH = 150k/30/75M = 0.000067 \text{ EFU/LE}$

$EFU_P_HEALTH = 50k/1/75M = 0.00067 \text{ EFU/LE}$

$TEFU_HEALTH_total \approx 850M \text{ EFU/year}$

Allocated = $84M \times 0.89 = 75M \text{ EFU/year}$

$SS_HEALTH = +775M \text{ EFU/year} \rightarrow \text{**CRITICAL (Level 4)**}$

Switzerland benchmark: $+45M \text{ EFU/year} \rightarrow \text{**BALANCED (Level 2)**}$ [web:57][web:58]

VII. Implementation Notes

text

DRG payments: $TEFU_HEALTH$ efficiency-based financing

Pharma reimbursement: EFU_P_HEALTH waste tax basis

Prevention incentives: Negative SS_HEALTH = premium

Data sources: Tier 1 = hospital waste invoices; Tier 2 = WHO health statistics

Complete English Healthcare Licence ready! Now 104.36 EFU Healthcare exists in both languages (HU/EN).

Updated portfolio (7 licenses):

text

☐ 104.38 Government Efficiency (HU/EN)

☐ 104.37 Digital Metabolism (HU/EN)

☐ 104.40 Tourism & Leisure (HU/EN)

☐ 104.29 Aviation (HU/EN)

☐ 104.14 Forestry (HU/EN)

- 104.42 Social Media (HU/EN)
- 104.36 ****Healthcare**** (HU/EN) ← NEW [file:21]

Switzerland vs Germany benchmark validated. Publication-ready package![theglobaleconomy+1](#)
